

## WANT TO KNOW HOW TO OPTIMISE YOUR SANITATION ORDER?

### TIPS AND TRICKS

- Does your water supply need a **drain**? This could be useful for a coffee machine or a steam oven for example, which can quite easily leak into a can for a short exhibition... (Note that it will then be up to the exhibitor to empty it).
- Ordering everything from the same operator is cheaper. In fact, in addition to the price according to volume, a single service provider manages the after-sales service and supervises various requests (for example to provide the right pipe diameter in relation to the connection).

### USEFUL INFORMATION:

- A flow necessarily implies a slope. At that point, you should expect to place a **podium** under the entire stand surface. The minimum internal height is 7 cm. This service can also be ordered from Palexpo.
- Palexpo's sanitary services also offers **air-conditioning**, **gas cylinders**, **compressed air**, as well as **dish washing** with or without hot water.
- Please note that wastewater air conditioners are prohibited by law in Switzerland.
